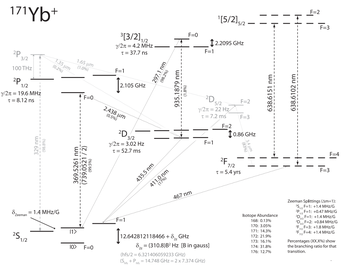
Trapped Ion Quantum Computing



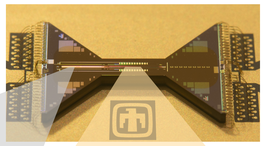
Vacuum System

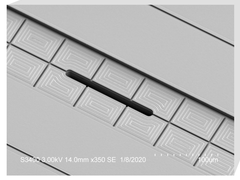
Phoenix Surface Trap

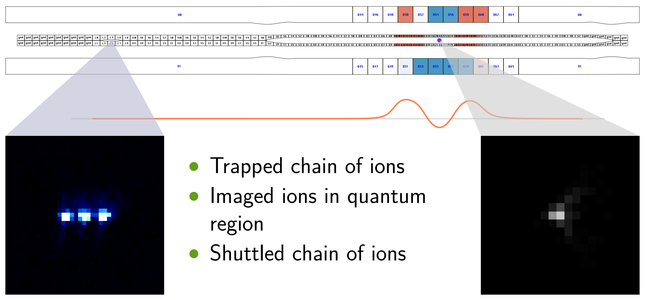
- Better metallization
  - Reducing noise
  - Less charging/photovoltaic effect

  30 quanta/s heating rate @ 3 MHz

  Measured by Sandia
- Segmented outer electrodes
- Better and faster ion loading



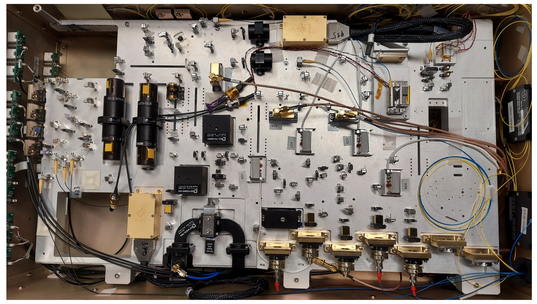




- Trapped chain of ions
- Imaged ions in quantum region
- Shuttled chain of ions

Raman System

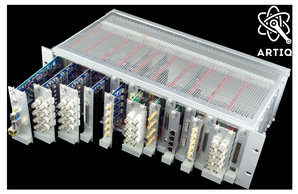
Miniaturized 369/399/780/935nm Beam Path



Control System

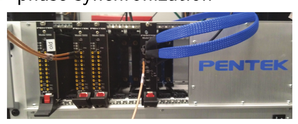
ARTIQ

- Artiq software
- Sinara hardware



RFSoC/Pentek

- integrated pulse-level control
- phase synchronization



Duke Artiq Extensions

- modular control software
- system code organization

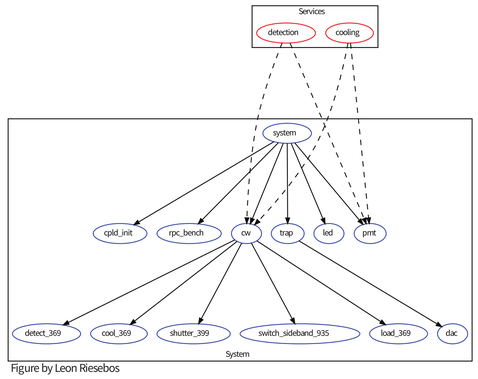


Figure by Leon Riesebos

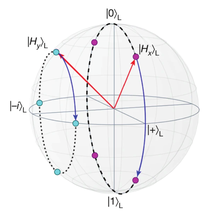
Imaging System

Applications



- Universal Quantum Computer
- 20+ qubits and high fidelity
- Quantum simulations of many body physics
- Quantum chemistry
- Quantum gravity
- Nuclear theory
- Quantum Error Correction
